Outlook - Issue 14 - May 2010

Electricity set to rise, Time to review contracts NOW!!!

A review of the supply of electricity to your complex can highlight thousands of dollars in potential savings! Prices are set to rise soon with infrastructure charges and the peak demand for power ever increasing. This is an opportunity to review your costs, (the same as a review of your grocery prices) and compare the current energy market.

Energy Audits save Companies Thousands \$\$\$\$\$\$

The savings from energy audits conducted have ranged from a minimum of 25% up to 40%. Making small changes can make a big difference. Our clients have been amazed with the results and some are kicking themselves that it had not been done sooner.

Australian Organisation for Quality Energy Division Presentation

Peter Greenham (*Chairman of Energy Division with the AOQE Qld*) presents a certificate of appreciation to Dr Patrick Glynn from the CSIRO after a presentation on micro grid sustainable electricity technologies. Dr Patrick Glynn discussed energy management with AOQ members and interested parties. It was a evening that generated a deal of interest in the options available to maximize energy resource usage.

Comparing OUR Emissions

There has been a reduction in emission levels since last year, but some states are doing more than others. You can see we have a long way to go.

Emissions (million tonnes)			
This Year to Date			
STATE	THIS YEAR TO DATE	LAST YEAR TO DATE	CHANGE
VIC	34.82	35.28	-1.3
NSW	36.63	38.75	-5.5
QLD	28.62	28.84	-0.8
SA	6.59	6.95	-5.2

Inspection of New Plant for Sustainability of Operations

A recent review of Greenhouse gas emissions led to a local quarrying company deciding to undertake additional improvements to their processing plant. The review also covered the transport of materials, and choice of equipment, all adding to the overall operation emissions reductions.

Random Fire Inspections being undertaken

Talking to one of the inspectors at a random site audit revealed up to 50% of inspected buildings have been non compliant under the current fire regulations and still causing some panic with owners. The uncertainty on the requirements of the regulations appears to be a primary issue.

Undertaking an audit
